- This Annual Report Form must be completed and submitted to the Department to satisfy the annual reporting requirements established in Rule 62-621.600, F.A.C.
- Submit this fully completed and signed form and any REQUIRED attachments by email to the NPDES Stormwater Program Administrator or to the MS4 coordinator (<http://www.dep.state.fl.us/water/stormwater/npdes/contacts.htm>). Files larger than 10MB may be placed on the FTP site at: [ftp://ftp.dep.state.fl.us/pub/NPDES\\_Stormwater/](ftp://ftp.dep.state.fl.us/pub/NPDES_Stormwater/). After uploading files, email the MS4 coordinator or NPDES Program Administrator to notify them the report is ready for downloading; or by mail to the address in the box at right.
- Refer to the Form Instructions for guidance on completing each section.
- Please print or type information in the appropriate areas below.

**Submit the form and attachments to:**

## SECTION II. MS4 MAJOR OUTFALL INVENTORY (Not Applicable in Year 1)

A.	Number of outfalls ADDED to the outfall inventory in the current reporting year (insert "0" if none): 0 (Does this number include non-major outfalls? <input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Applicable)		
B.	Number of outfalls REMOVED from the outfall inventory in the current reporting year (insert "0" if none): 0 (Does this number include non-major outfalls? <input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Applicable)		
C.	Is the change in the total number of outfalls due to lands annexed or vacated? <input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Applicable		

### SECTION III. PART V.B. ASSESSMENT PROGRAM

A.	<p>Provide a brief statement as to the status of water quality monitoring plan implementation. Status may include sampling frequency changes, monitoring location changes, or sampling waiver conditions.</p> <p><u>DEP Note:</u> If permittee participates in a collaborative monitoring plan, permittee may refer to a joint response as defined by the interlocal agreement.</p> <p>Name and date of the approved plan: Current approved plan for the Group Monitoring Plan is September 8, 2016 Status: <i>The Group Monitoring Report is included in the Cycle 4, Year 3 Joint Annual Report. The individual Assessment Plan has been approved by FDEP on July 25, 2018</i></p>
B.	<p>Provide a brief discussion of the monitoring and loading results to date, which includes a summary of the water quality monitoring data and / or stormwater pollutant loading changes from the reporting year.</p> <p><u>DEP Note:</u> Results must be specific to the permittee's SWMP.</p> <p><i>Please refer to the attached City Annual Assessment Report.</i></p>
C.	<p>Attach a monitoring data summary as required by the permit. An analysis of the data discussing changes in water quality and/or stormwater pollutant loading from previous reporting years.</p> <p><u>DEP Note:</u> Analysis must be specific to the permittee's SWMP.</p> <p><i>See response for Section III B, above</i></p>

### SECTION IV. FISCAL ANALYSIS

A.	Total expenditures for the NPDES stormwater management program for the current reporting year: \$12,369,687
B.	Total budget for the NPDES stormwater management program for the subsequent reporting year: \$14,333,080
C.	<p>Did the current reporting year resources decrease from the previous year? Y <input type="checkbox"/> / N <input checked="" type="checkbox"/></p> <p>If program resources decreased, provide a discussion of the impacts on the implementation of the SWMP.</p> <p>N/A</p>

## SECTION V. MATERIALS TO BE SUBMITTED WITH THIS ANNUAL REPORT FORM

Only the following materials are to be submitted to the Department along with this fully completed and signed Annual Report Form (check the appropriate box to indicate whether the item is attached or is not applicable):

## WEST PALM BEACH

### **MS4 Assessment Program to Satisfy Part V. – Monitoring Requirements**

Submitted by City of West Palm Beach – MS4 Permit No. FLS000018-004

*March 25, 2020*

---

#### **Introduction**

Part V of the Municipal Separate Storm Sewer System (MS4) permit for Palm Beach County and co-permittees (FLS000018-004) calls for the creation of an assessment program to determine the overall effectiveness of the Stormwater Management Program (SWMP). This Assessment Program shall include the three following components:

- Water Quality Monitoring Plan,
- Pollutant Loading Estimate Plan, and
- Evaluation and Response Plan

The intent of the program is to identify where local sources of urban stormwater are adversely affecting surface water resources so that decisions can be made to mitigate these effects accordingly. The City of West Palm Beach has gone to great lengths to protect the potable water supply conveyed via M-Canal from Grassy Waters Preserve (Water Catchment Area) to Lake Mangonia and Clear Lake where the City's water treatment plant is located. These measures include diverting most of the stormwater within the City away from these waterbodies and ultimately to Lake Worth Lagoon via the C-17 and C-51 canals or directly through 48 direct outfalls to the Lake Worth Lagoon. The City has identified four receiving waterbodies to monitor the effects from stormwater contributions from its MS4: Lake Worth Lagoon (divided into two segments, north and central), Grassy Waters Preserve, Lake Mangonia, and Clear Lake (Figure 1).

This report satisfies Part V, Assessment Program (3.) *Reporting of Assessment Results* and includes:

- The status of the Assessment Program
- Summary of results
- Analysis of changes from previous monitoring years

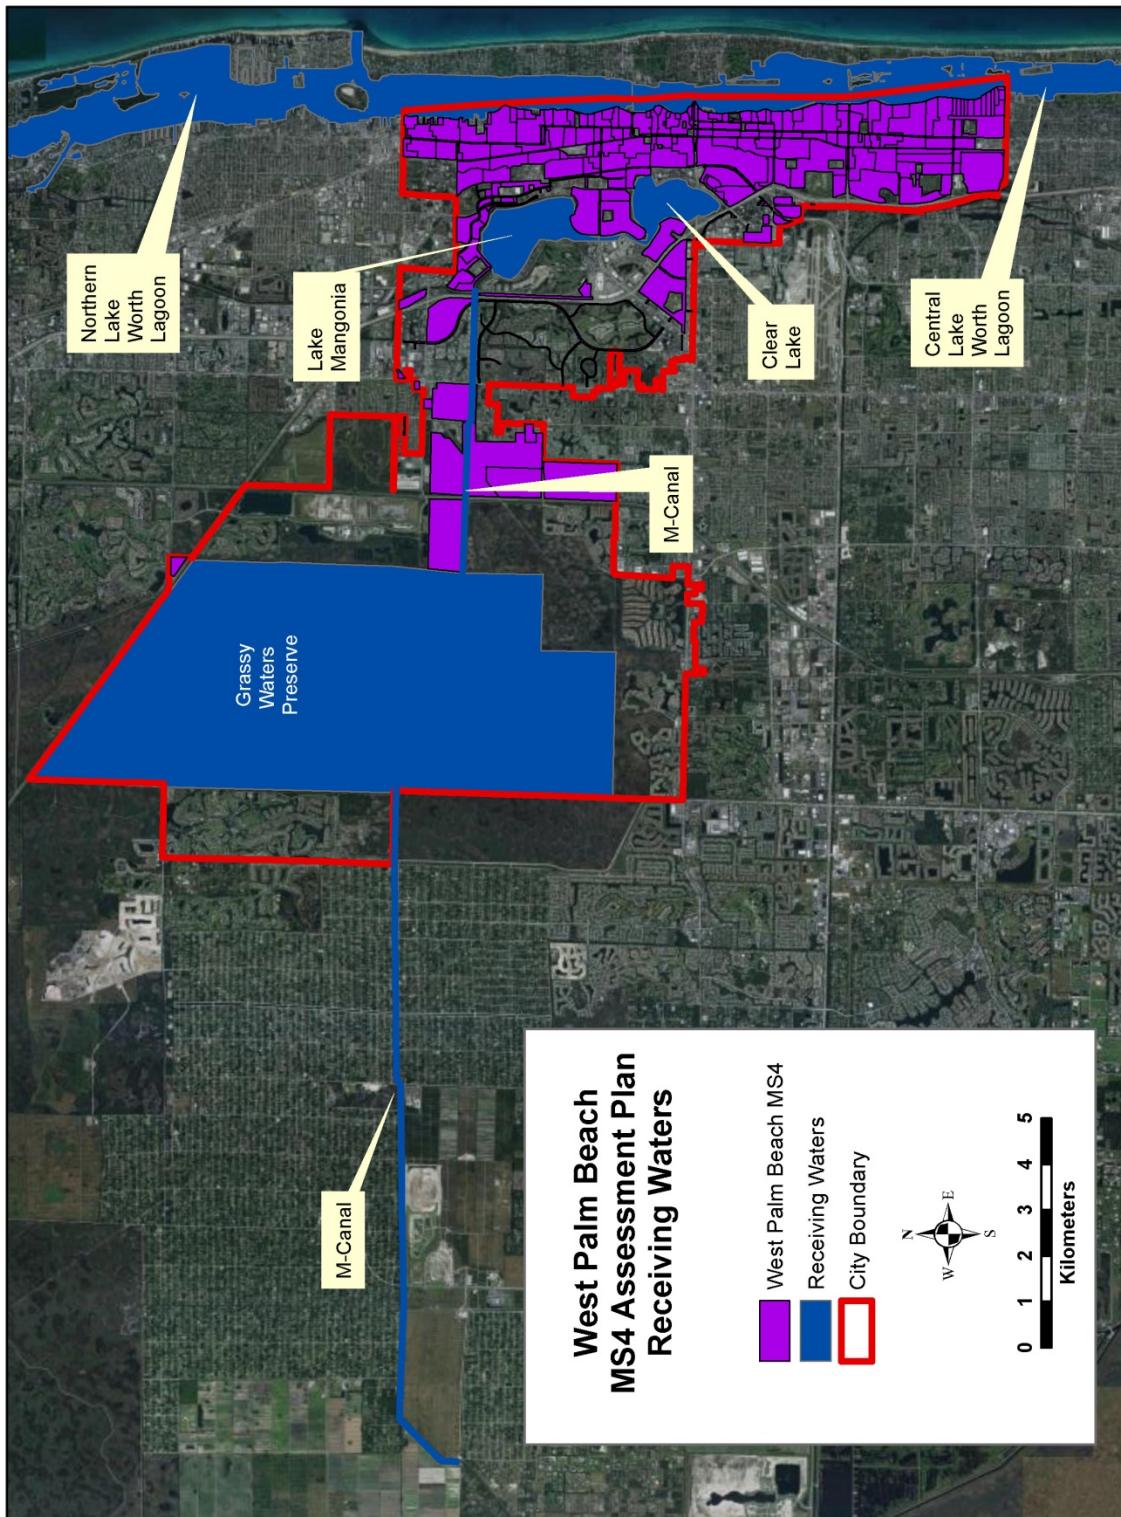

Figure 1. Receiving Waterbodies for City of West Palm Beach.

## Status of the Monitoring Program

The City of West Palm Beach's MS4 Assessment Plan was submitted to the Florida Department of Environmental Protection (FDEP) for approval as part of the Year 1 annual report in March of 2018 and was approved on July 25, 2018. This report covers Year 3 of the Cycle 4 MS4 permit representing the period between October 2018 and September 2019.

The City of West Palm Beach maintains a water quality database within the City's laboratory information management system, also known as a LIMS system, which the data was exported from for these analyses. The Palm Beach County data for Lake Worth Lagoon were extracted from the FDEP IWR RUN 58 and Watershed Information Network (WIN) databases, and the South Florida Water Management District's DBHYDRO database. All of the data has undergone thorough inspection and quality assured. Ultimately all of the data will be uploaded and incorporated into the appropriate State Database.

The following sections describe the monitoring programs by receiving waterbodies.

## Receiving Waters

### Lake Worth Lagoon

Lake Worth Lagoon is currently monitored by Palm Beach County Environmental Resources Management (PBCERM) via an Inter-local agreement between the Palm Beach County MS4 Co-Permittees and the Northern Palm Beach County Improvement District. The City, along with other entities discharges stormwater to both the North and Central Estuarine Nutrient Regions of Lake Worth Lagoon. FDEP refers to these waterbodies as WBIDs 3226E1 and 3226F1 respectively. Both of these segments were listed as impaired for nutrients (chlorophyll-a) and copper during the last Group 3 Cycle 3 assessment in 2016. The impairment isn't likely due to a single discharge location as the Lagoon integrates pollutants from numerous sources.

The monitoring locations for Lake Worth Lagoon are listed in Table 1 and shown in Figure 2.

For this analysis, data from PBCERM were extracted from FDEP IWR Run 58 database and the SFWMD DBHYDRO database. Through another arrangement, data for stations LWL-1, LWL-4, LWL-8, LWL-11, and LWL-13 are reported by the SFWMD under the "21FLSFWM" organization code while stations 18C, 18D 11 and 13 are reported by PBCERM under the "21FLPBCH" organization code. All data were compiled into a single dataset for analysis.

### **Grassy Water Preserve**

Grassy Waters was purchased and protected as the primary potable water supply source for the City of West Palm Beach and other municipalities who receive water from the City. Monitoring within Grassy Waters by the City is ongoing to ensure its integrity as one of the last, least impacted parcels of the original Everglades. Recently, developments along the perimeter have been allowed to discharge treated excess stormwater into the preserve. These discharges are monitored as required by the Environmental Resource Permits, 50-03926-P (Baywinds) and 50-02120-S-06 (Ibis).

The City's monitoring locations within Grassy Waters are shown in Table 3 and Figure 3.

### **Clear Lake and Lake Mangonia**

Clear Lake, along with the adjacent Lake Mangonia, are the two storage lakes for the potable water supply with the East Lobe of Clear Lake as the withdrawal point for the City's water treatment plant. There are no direct stormwater inputs to either of the lakes within the City's limits but indirect stormwater may be contributed by the L-8 canal (pumped into M-Canal at Control 2), M-Canal, C-17 Canal, Grassy Waters (as previously mentioned) and the Renaissance Stormwater Project. The C-17 Canal receives stormwater from various areas and the City looks to use it to augment the water supply when necessary. The Renaissance Stormwater Project is an alum-injection stormwater treatment facility for a portion of downtown West Palm Beach whose waters could be used supplement Clear Lake and is monitored as part of its Environmental Resource Permit, 50-04000-P. Lake Mangonia has been listed as impaired for fecal coliform as part of Cycle 3 of FDEP's Assessment Program. Monitoring of the source waters along the system will ensure the integrity of the water supply while enduring the waters meet surface water quality standards. These data will be supplemented with the most recent Impaired Waters Rule database to provide data necessary to assess the status and trends with regards to Clear Lake and Lake Mangonia.

## Data Summaries and Time-series Plots

Data summaries and time series plots for each site can be found in Appendix A.

## Trend Analysis

The following parameters were selected for this analysis based on the requirements of the permit:

- Biochemical Oxygen Demand (mg/L)
- Total Copper (mg/L)
- Total Nitrogen (as N) (mg/L)
- Total Phosphorus (mg/L)
- Total Suspended Solids (TSS) (mg/L)
- Total Zinc (mg/L)

Trend analyses were performed on monthly mean data using the Season Kendall Tau method for the parameters for which sufficient data were available (Table 6). The entire period of record was included and represents the City specific baseline for which future assessments will be compared. Trends that are identified as “shallow” are defined as statistically significant trends with a rate of change less than 5% of the median value per year, and those identified as “steep” are defined as statistically significant trends with a rate of change greater than or equal to 5% of the median value per year. Thus, “shallow trends” represent water quality conditions that are changing (either increasing or decreasing) at a lesser rate of change than the rate of change for “steep trends.” These are relative terms, and the precise rates of change are presented for each station in the statistical detail appendices. The terms “steep” and “shallow” do not imply either ecological significance or the lack of ecological significance.

As shown in the table, most of the parameters are showing decreasing or no trends in nutrients. Stations 21FLPBCH11, 21FLPBCH13, 21FLPBCH18C, and 21FLPBCH18D all have seen decreasing trends in total nitrogen concentrations. Increasing trends can be seen in phosphorus concentrations in the Grassy Water Preserve. Increasing trends in nitrogen and phosphorus concentrations can also be seen at stations 21FLSFWMWL-8 and 21FLSFWMWL-11. 21FLSFWMWL-11 also has an increasing trend in chlorophyll a. Both of these stations are located in the Central Lake Worth Lagoon Estuarine Region and receive loading from several co-permittees. Increasing trends can also be seen in DO though unlike the other parameters, increasing DO is beneficial to aquatic life. Detailed output from the trend analysis can be found in Appendix B.

These trends will be updated as part of each annual report with the purpose of identifying areas in need of further review.

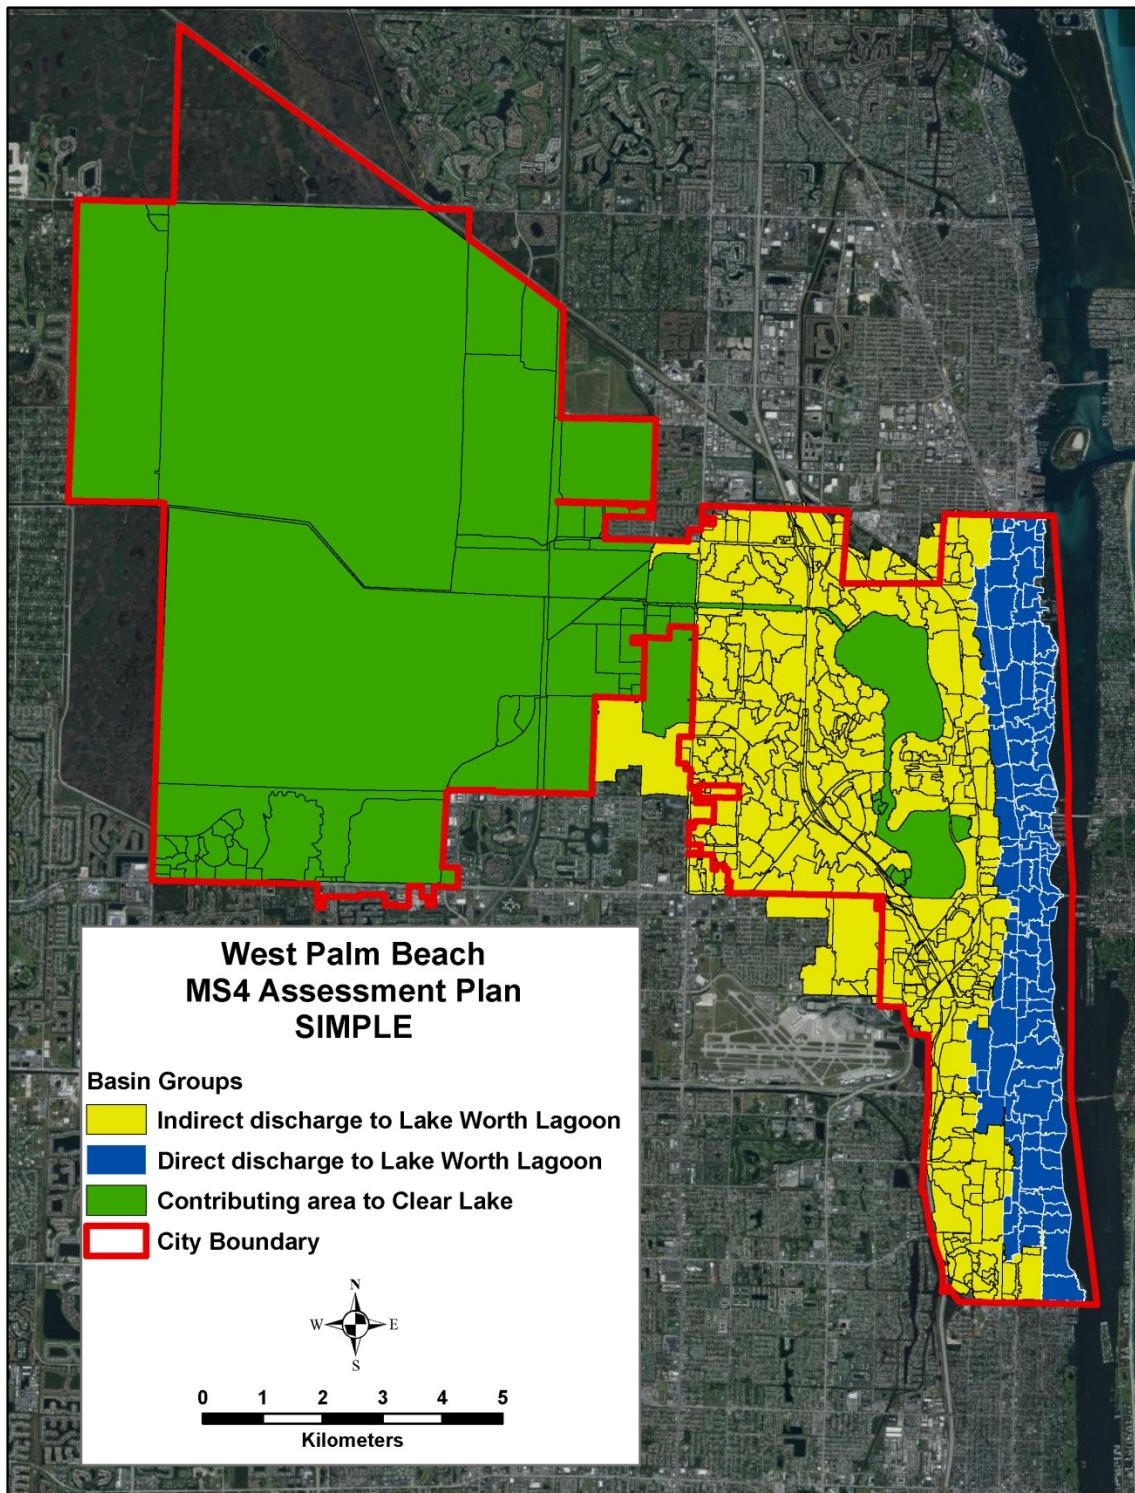

## Pollutant Loading Estimate Plan

The City recently deployed the Spatially Integrated Model for Pollutant Loading Estimates (SIMPLE) during the development of its Stormwater Master Plan. The model was originally developed for Sarasota County for compliance with MS4 permit. The current City version of the model is set to provide pollutant load estimates for the following parameters: biochemical oxygen demand, copper, total nitrogen, total phosphorus, total suspended solids, and zinc.

The SIMPLE model extent is shown in Figure 5 and includes all of the City's incorporated area and not limited to the MS4 boundary. The stormwater catchments mimic those used in the City's flood model. The catchments are combined into three Basin Groups. As the City's drinking water supply, the contributing drainage area to Clear Lake was designed to be kept separated from the City's stormwater system though in recent year's stormwater discharges were permitted to Grassy Water Preserve. The Direct discharge to Lake Worth Lagoon basin group includes those areas draining directly to the lagoon through City outfalls. The Indirect discharge to Lake Worth Lagoon group includes those areas drained via control structures on the C-17 and C-51 canals.

The initial loading effort was completed in November of 2017. The landuse coverage utilized represented the conditions in 2015-2016. Land use event mean concentrations (EMCs) were taken from the Palm Beach County National Pollutant Discharge Elimination System (NPDES) Cycle 3 – Year 3 Joint Annual Report ([Mock•Roos, 2013](#)). Stormwater best management practices (BMPs) were identified using a combination of SFWMD permit reviews, Palm Beach County Property Appraiser GIS information, and 2015 aerial photography. Removal efficiencies were based on *Pollutant Removal Efficiencies for Typical Stormwater Management Systems in Florida* (Harper 2008) and *Performance Efficiency of Dry Detention and Underdrain* (Harper 2015). Rainfall was estimated at 61 inches based on the *Draft Florida Stormwater Quality Applicant's Handbook* (FSQAH)(FDEP,2010). This initial model will set the 2016 baseline for future assessments.

To represent the current conditions, the landuse and BMP layers were updated to represent the conditions through 2019. The single biggest change was the development of the baseball spring training facility with the appropriate BMPs. The City has also implemented other structural BMPs to decrease loads.

**Figure 5.** The extent of the City of West Palm Beach's SIMPLE pollutant loading model.

Table 7 compares the results between the 2016 and 2019 model scenarios. Negative differences denote decreases in model estimates between 2016 and 2019. Decreases can be seen in all parameters in both the Direct and Indirect discharge watersheds to Lake Worth Lagoon. The decreases can be attributed to the implementation of new stormwater BMPs. Increases in estimated loading of BOD and zinc to Clear Lake are also seen. The Clear Lake Watershed experienced the most landuse changes, particularly the ballpark.

**Table 7. Comparison between the 2016 and 2019 scenarios.**

The data can also be expressed in terms of unit area loads, or pounds per acre per year. This expression of the results takes into account the area drained and allows for the direct comparisons between watersheds and years regardless of landuse and BMPs. Table 8 shows the results between the 2016 and 2019 scenarios.

As can be seen, in each of the watersheds, the unit area loads either held the line or decreased. The only exceptions were BOD and zinc in the Clear Lake watershed.

## Evaluation and Response Plan

Based on the analyses above, the City of West Palm Beach is effectively implementing its Stormwater Management Plan (SWMP). Of the stations where there is an adequate number of samples, nutrients either exhibit decreasing or no trends. Dissolved oxygen is exhibiting increasing or no trends. The increasing trend in phosphorus in Grassy Waters is being addressed through cooperation between the City and dischargers to Grassy Waters.

Loading estimates have decreased over the period of record as well. Loads to Lake Worth Lagoon from either direct or indirect drainage areas have decreased for all parameters. Nutrient Loads in the Clear Lake watershed have also decreased. The only parameters with an increase were BOD and zinc. These increases will be further explored to determine where further reductions are available to accompany the changes in landuse.

On top of the load reductions exhibited above, the City further reduced loadings through the implementation of the SWMP. These load reduction credits not only include the educational components covered in the Year 3 Joint Annual Report but also through other activities such as the street sweeping program. During Year 3, the City's street sweeping program removed an additional 3,423,920 pounds of material that further reduced the TN load by an additional 1,928 lbs and TP by an additional 1,236 lbs.

Through the implementation of the SWMP and the Stormwater Master Plan, it is reasonable to expect the city to continue to reduce loads from their jurisdiction.
