

Roadway Maintenance Practices to Reduce Pollutants

Town of Jupiter Inlet Colony

The permit requires annual review, and revision if needed, of written Standard Operating Procedures (SOPs) and plans (i.e. public education and outreach, training and inspections) and should be noted in the Jupiter Inlet Colony Report Form.

Roadway repairs and maintenance may take place anywhere throughout the Town of Jupiter Inlet Colony's jurisdictional area and is conducted on an as-needed basis.

Major repair work is typically done as a construction project by a qualified contractor. These projects most often required a *Notice of Intent* under the state's *Generic Construction Permit*, which required a Stormwater Pollution Protection Plan. Routine inspections are done as part of the construction site inspection program.

Minor repairs, typically completed by municipal staff, are performed using the following practices:

- Painting, striping, marking, and asphalt and concrete cutting or repair activities are done in dry weather.
- Nearby storm drain inlets are protected by covers, straw bales, sand bags, filter fabric or plastic to reduce the possible entry of wastes, dusts, overspray and/or slurry.
- All waste and debris remaining after the work is swept up and removed.
- Water use is minimized when saw-cutting concrete. The waste slurry is allowed to dry and then swept up or a wet vacuum is used to pick up the waste slurry during or immediately after cutting.
- Maintenance supplies (i.e. cement bags, sealants, and tars) are stored under cover and away from drainage areas.
- Waste, scraps, rust and paint from any sandblasting or painting projects is collected and disposed of properly.
